THE FRESH FACE OF OUR INTERFACE

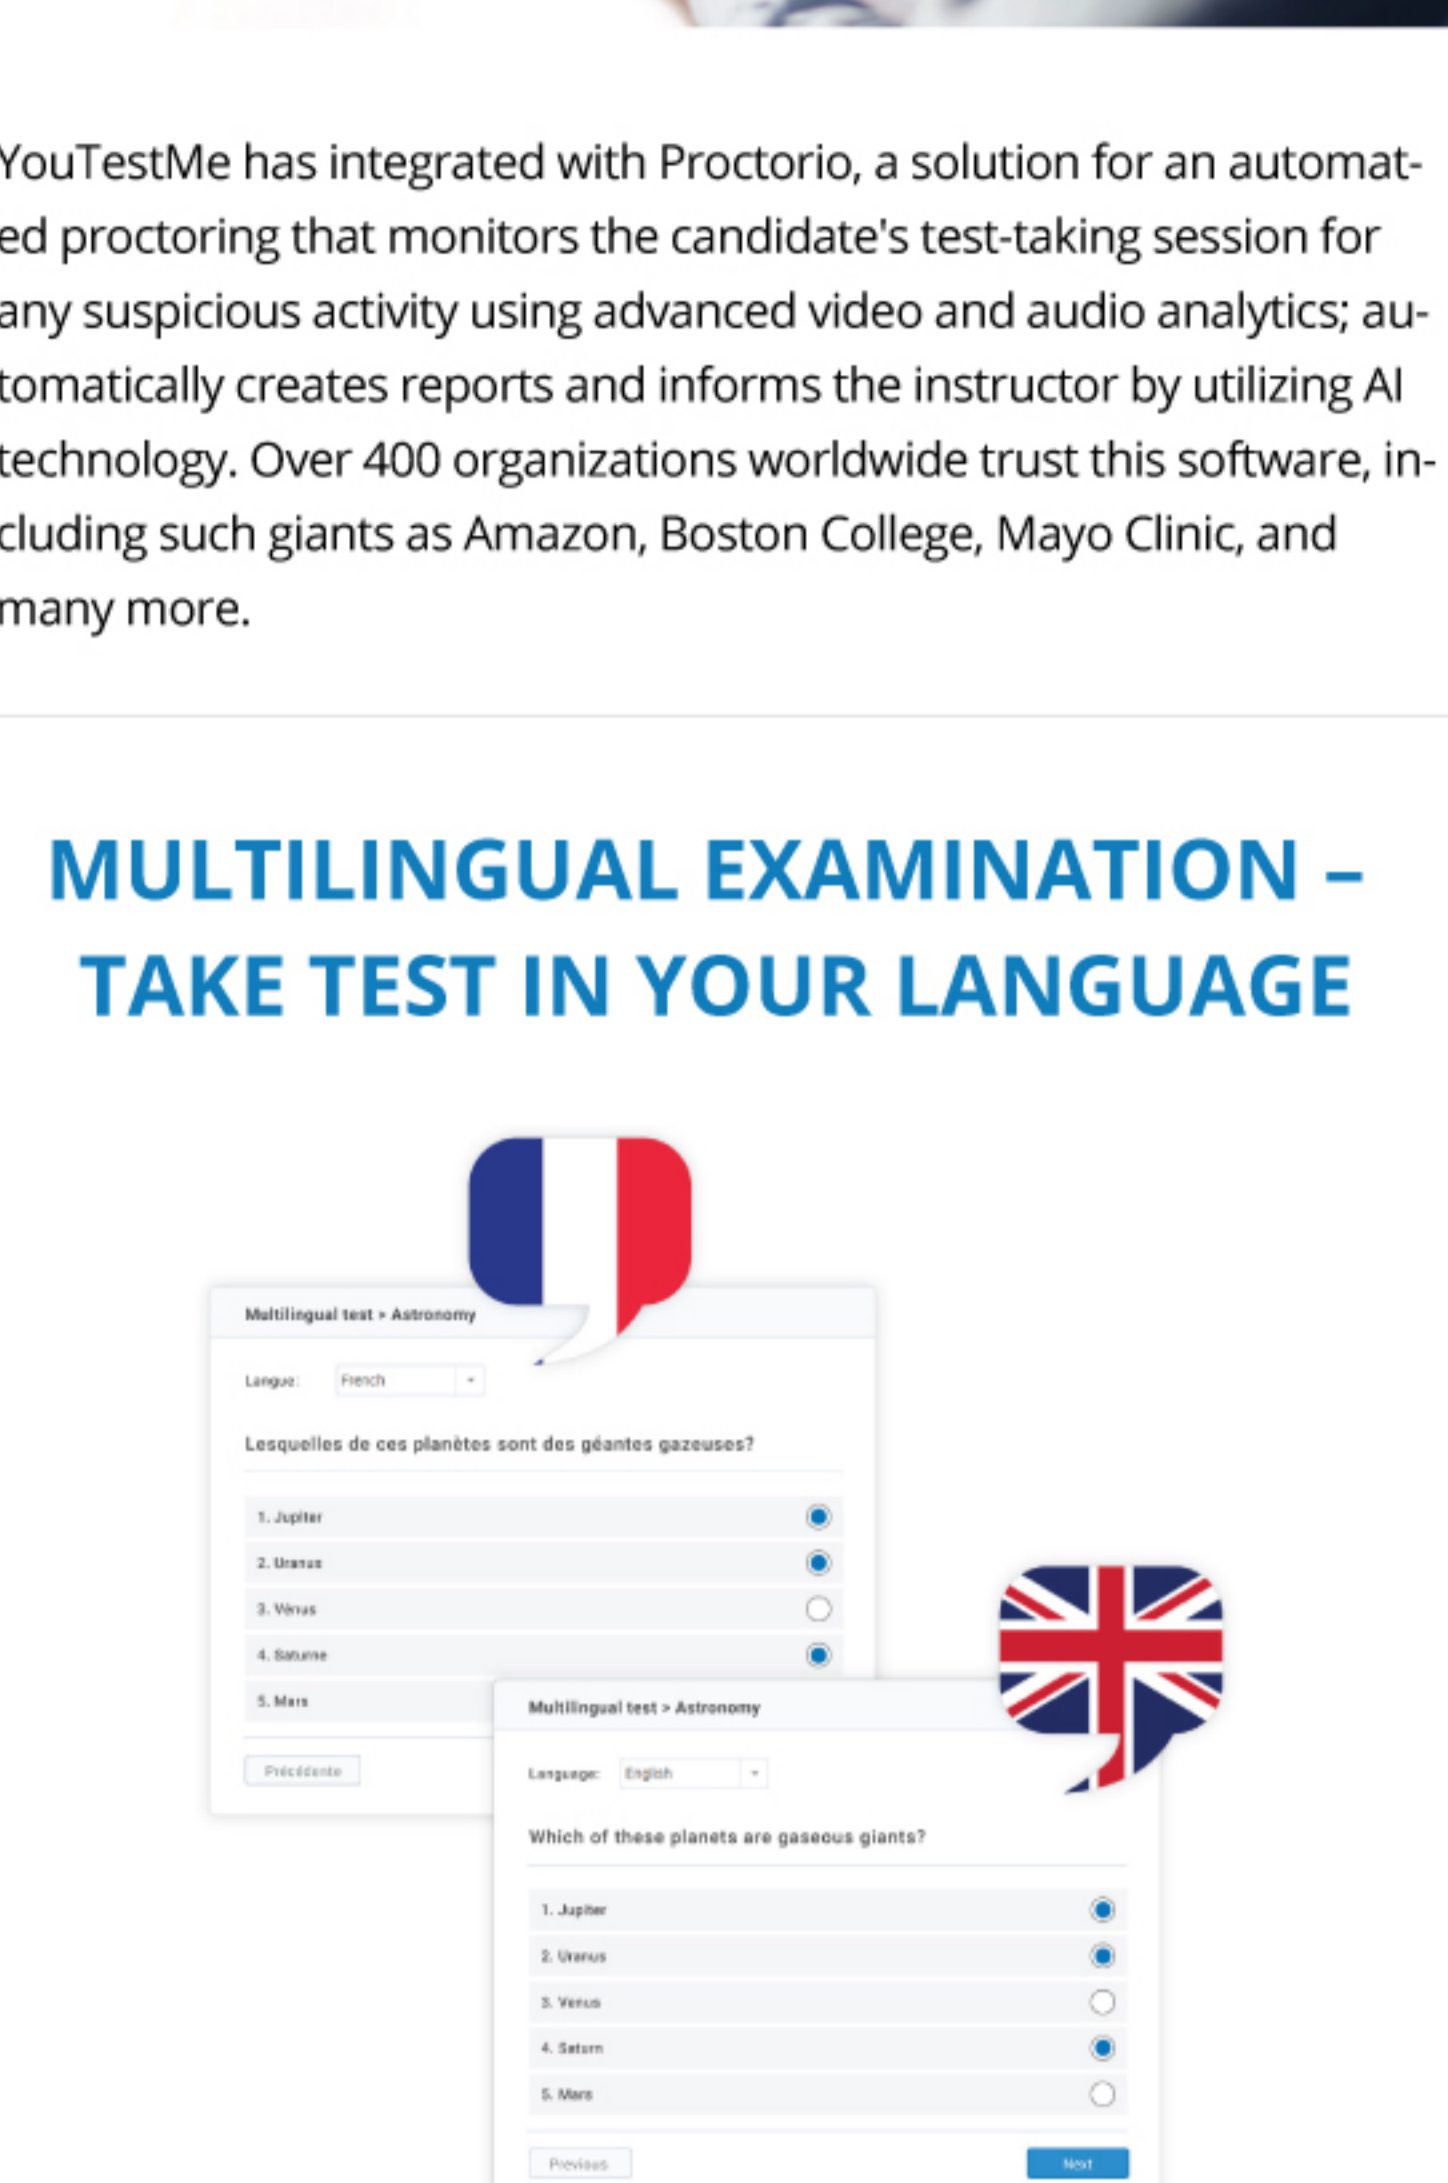

With the improved YouTestMe GetCertified interface design, you will find working in our app not only faster but much more comfortable and enjoyable, too. You can now navigate smoothly, see all functionalities on the dashboard, have clear access to all information, and easily achieve your desired goal.

SINGLE SIGN-ON BASED ON SAML 2.0

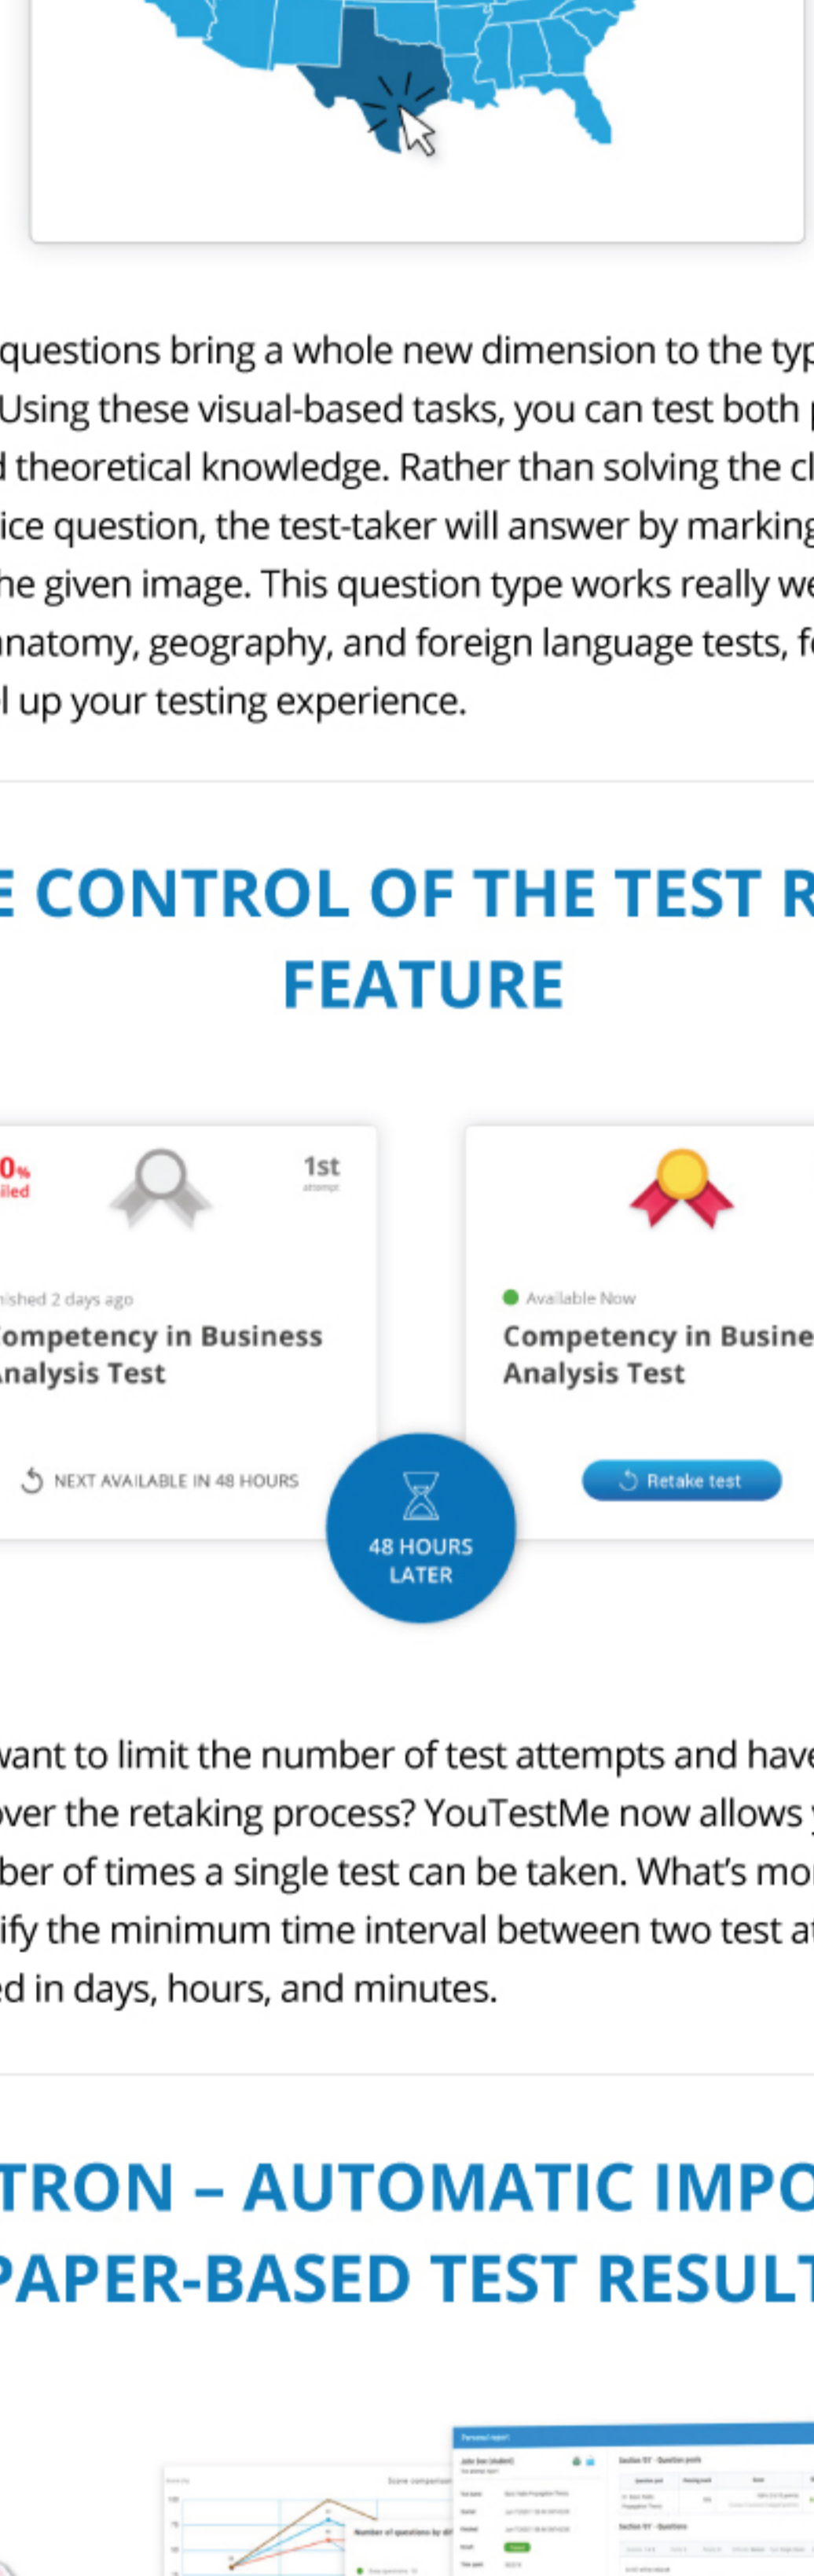

We bet you are tired of remembering different credentials for each app you use. If SSO (SAML 2.0) is already part of your IT environment, YouTestMe can now integrate efficiently: the on-boarding process is even simpler now! YouTestMe GetCertified enables effortless access to exams from any other system, such as LMS, CRM, or HR software.

PROCTORIO - ONLINE TEST MONITORING

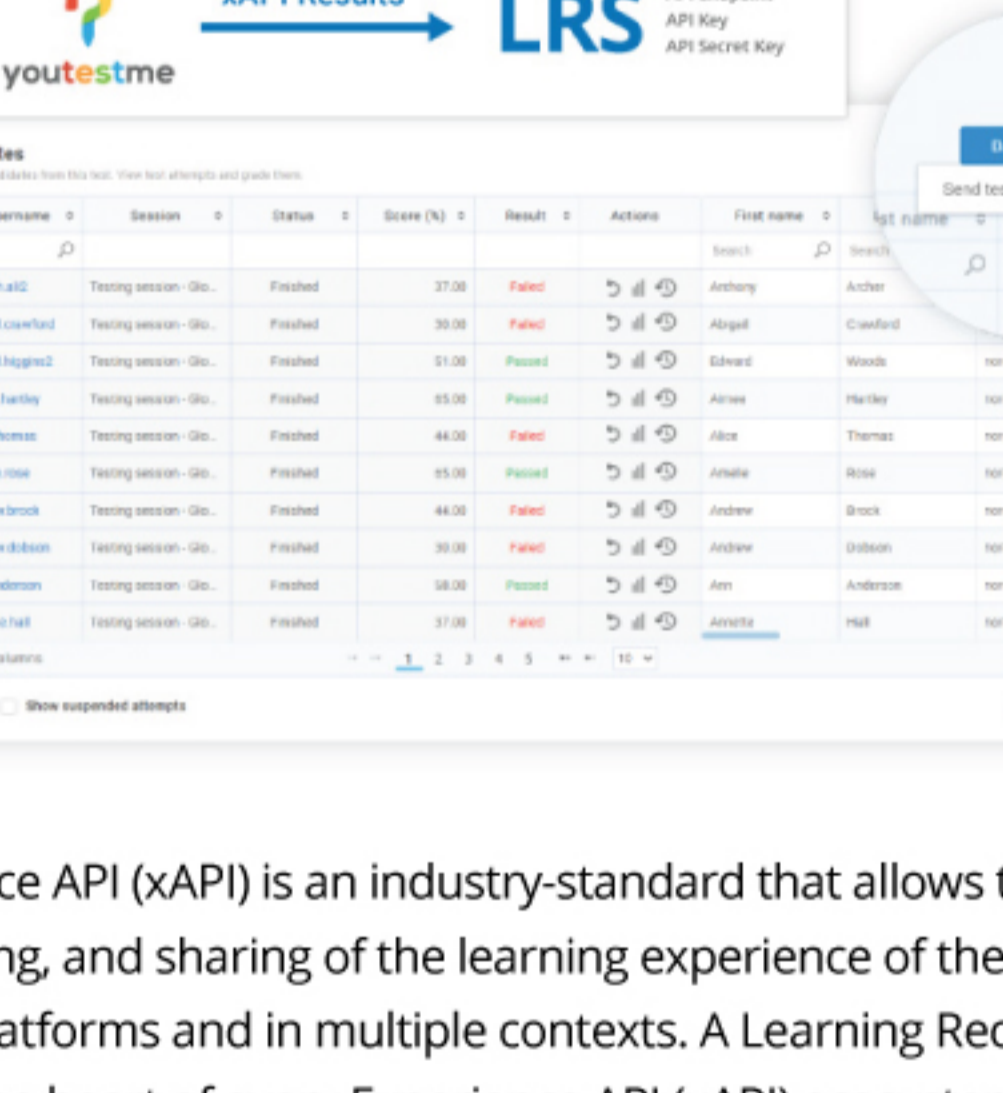

YouTestMe has integrated with Proctorio, a solution for an automated proctoring that monitors the candidate's test-taking session for any suspicious activity using advanced video and audio analytics; automatically creates reports and informs the instructor by utilizing AI technology. Over 400 organizations worldwide trust this software, including such giants as Amazon, Boston College, Mayo Clinic, and many more.

MULTILINGUAL EXAMINATION – TAKE TEST IN YOUR LANGUAGE

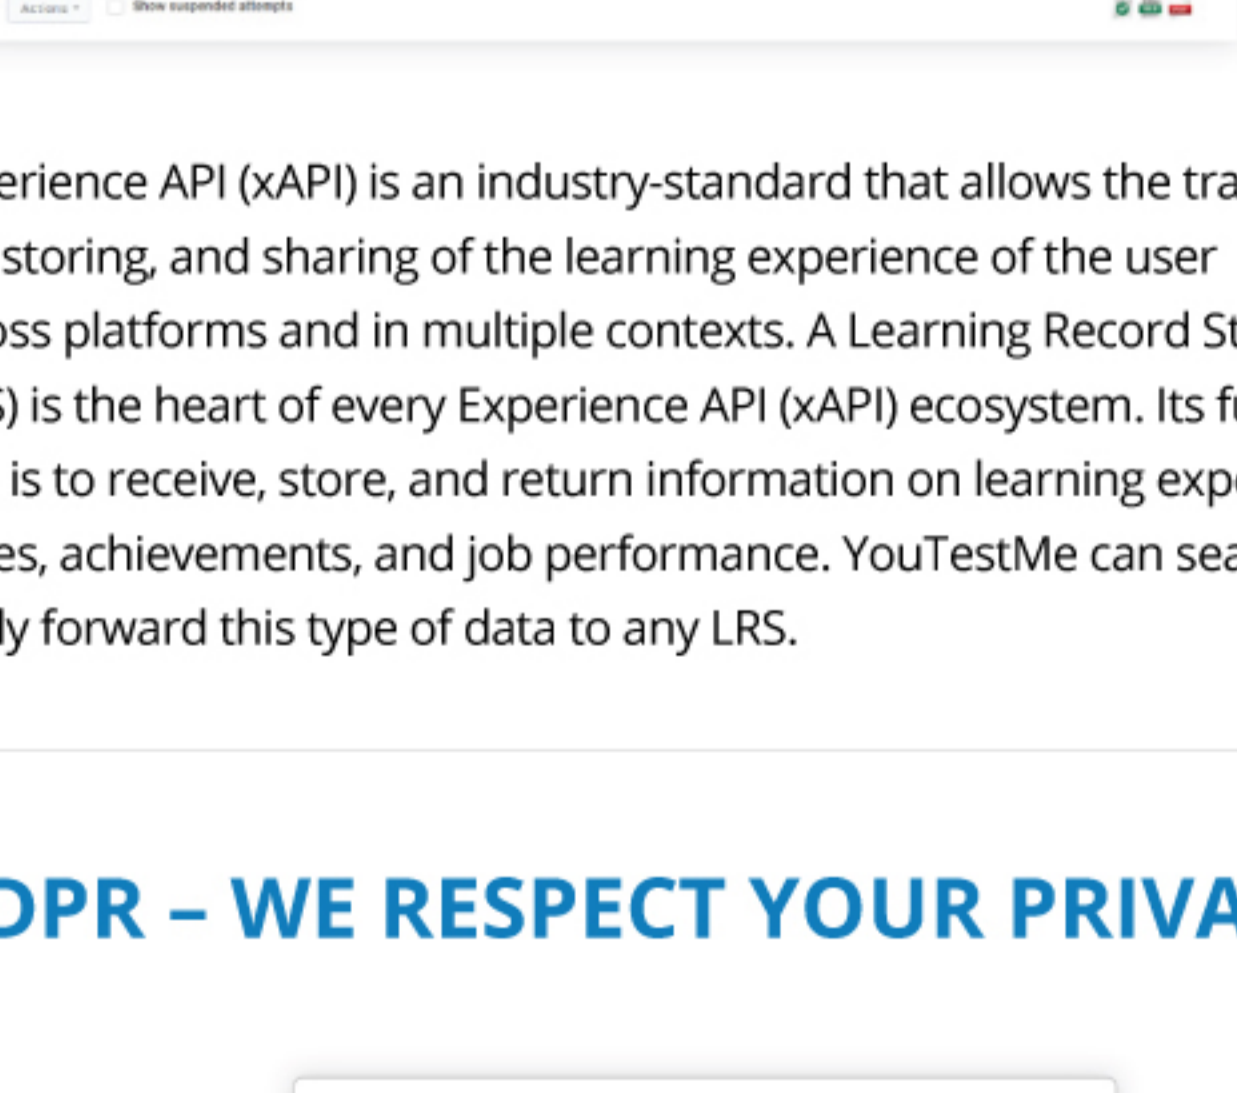

Are you an international corporation conducting certifications and tests in more than one language? In addition to the multilingual interface, YouTestMe can now feature multilingual question content. You can create different language versions of your test and be sure that the candidate will take the preferred version. This means no more separate tests for each language – in other words, test management and reporting have just turned more practical and way less time-consuming.

INTERACTIVE EXAMINATION: WHAT'S HOT ABOUT HOTSPOT QUESTIONS

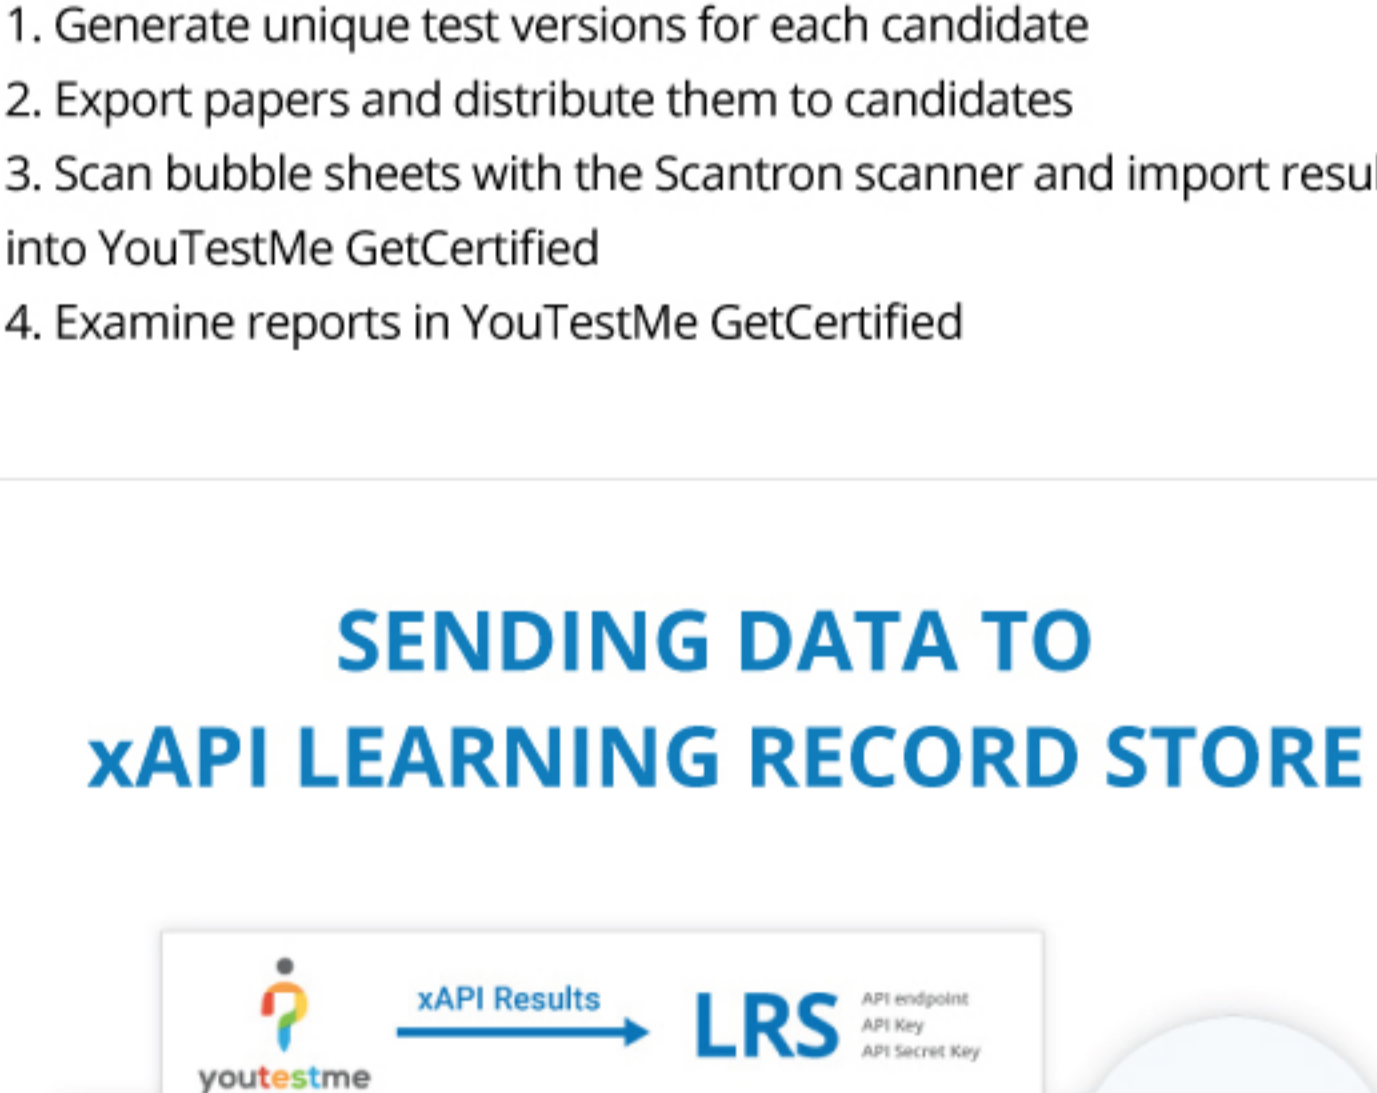

Hotspot questions bring a whole new dimension to the typical test format. Using these visual-based tasks, you can test both practical skills and theoretical knowledge. Rather than solving the classic multiple-choice question, the test-taker will answer by marking a certain area of the given image. This question type works really well with human anatomy, geography, and foreign language tests, for example. Level up your testing experience.

MORE CONTROL OF THE TEST RETAKE FEATURE

Do you want to limit the number of test attempts and have more control over the retaking process? YouTestMe now allows you to set the number of times a single test can be taken. What's more, you can specify the minimum time interval between two test attempts, measured in days, hours, and minutes.

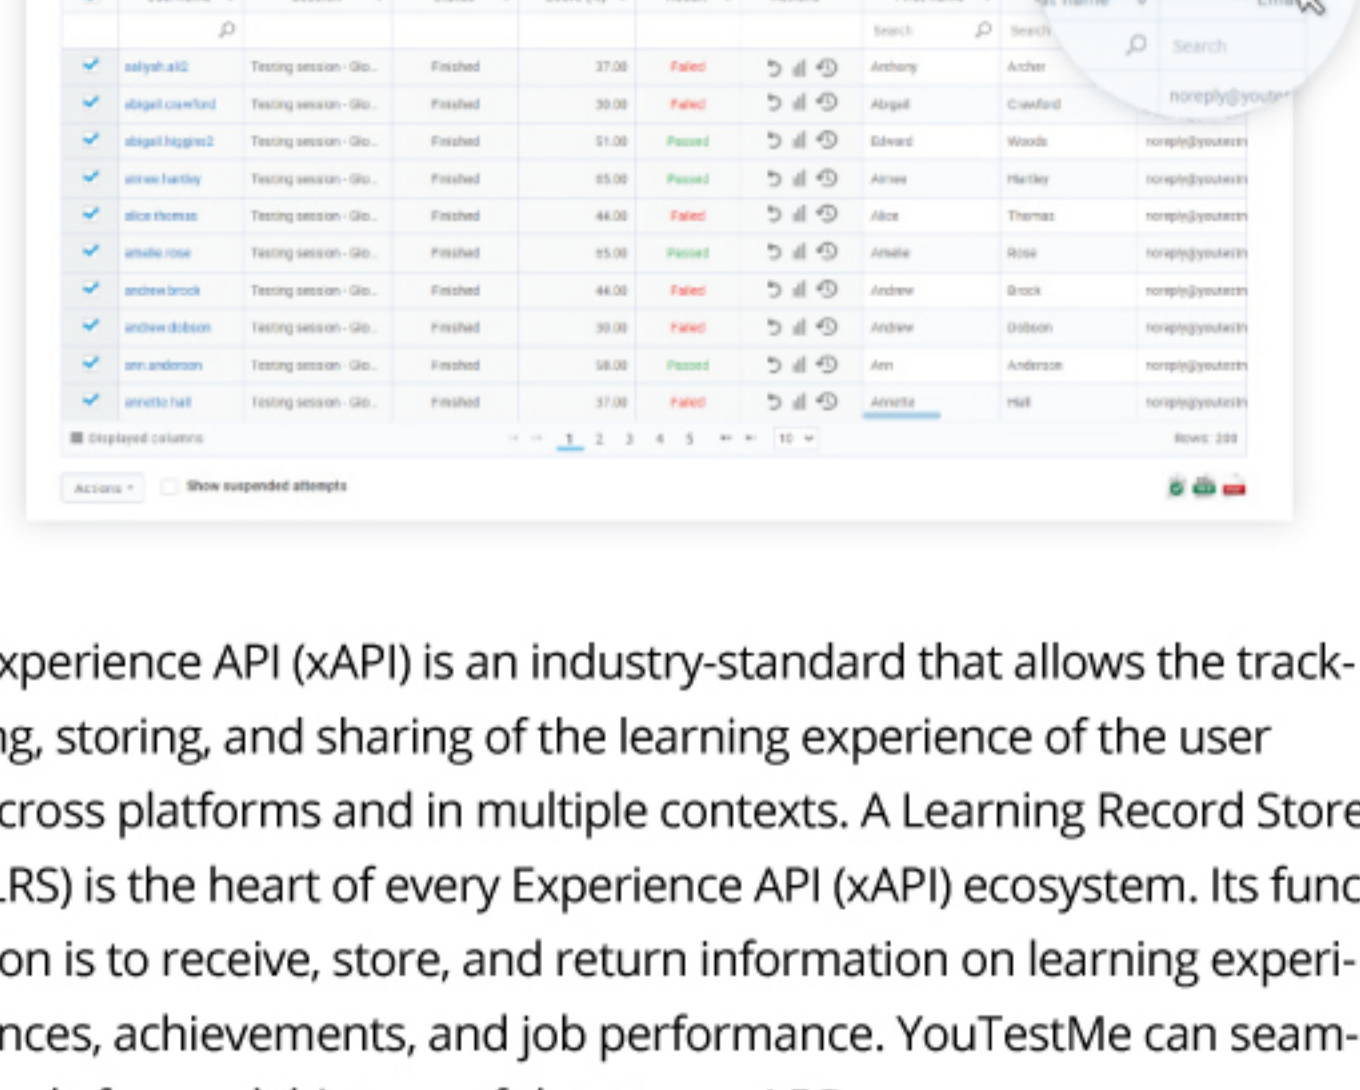

SCANTRON – AUTOMATIC IMPORT OF PAPER-BASED TEST RESULTS

Allow your candidates to take tests on paper at any location, and then import results back to the system without any data loss. YouTestMe now fully supports Scantron bubble sheet scanning outputs, which is the most used standard for collecting printed test results.

1. Generate unique test versions for each candidate
2. Export papers and distribute them to candidates
3. Scan bubble sheets with the Scantron scanner and import results into YouTestMe GetCertified
4. Examine reports in YouTestMe GetCertified

SENDING DATA TO xAPI LEARNING RECORD STORE

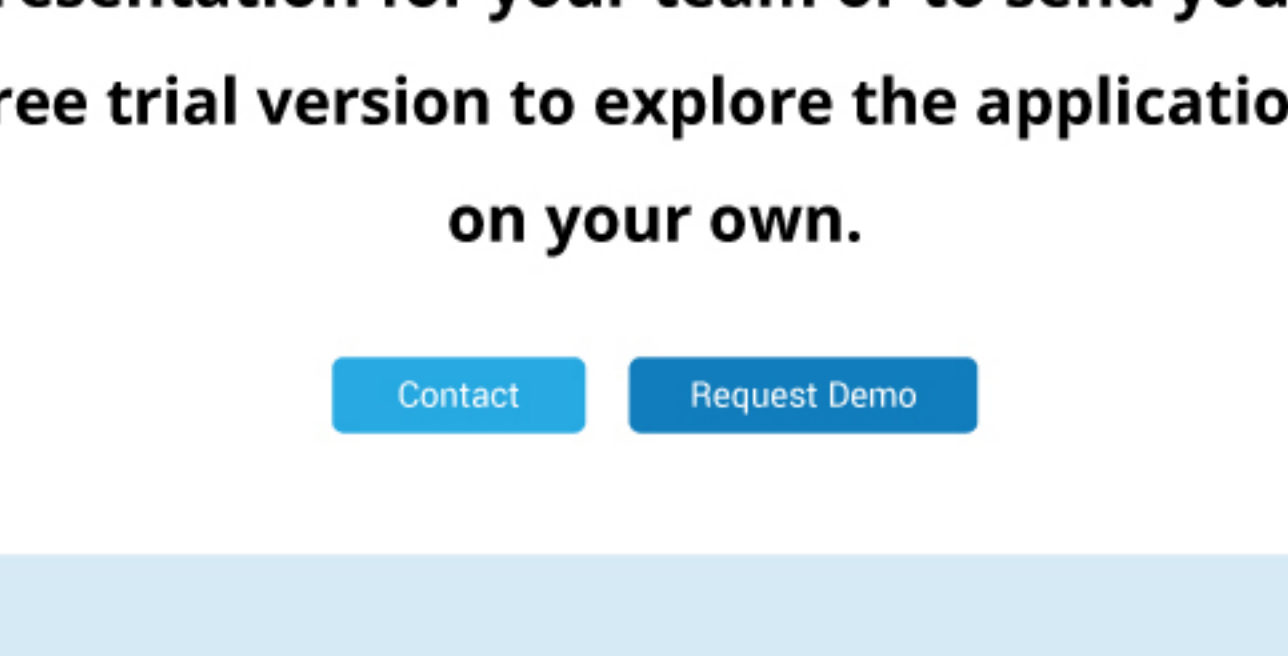

Experience API (xAPI) is an industry-standard that allows the tracking, storing, and sharing of the learning experience of the user across platforms and in multiple contexts. A Learning Record Store (LRS) is the heart of every Experience API (xAPI) ecosystem. Its function is to receive, store, and return information on learning experiences, achievements, and job performance. YouTestMe can seamlessly forward this type of data to any LRS.

GDPR – WE RESPECT YOUR PRIVACY

GDPR stands for General Data Protection Regulation and refers to the European Union regulation for data protection for all European Union individuals. Since data privacy and security are essential for the YouTestMe, we have developed the features that allow our customers to be fully compliant with the GDPR requirements.

MICROSOFT AZURE SERVERS AND FEDRAMP

You will be glad to learn that YouTestMe is now hosted by FedRAMP-compliant Microsoft Azure servers designed for government solutions. With end-to-end encryption and security hardening, our cloud solution is now every bit as secure as the YouTestMe on-premise solution.
