

YouTestMe GetCertified

Product Brochure

General information about the GetCertified product

Introduction

YouTestMe – GetCertified is a software system whose main features include:

- A powerful **test generator** for a unique testing experience;
- A module for creating and customizing **certificates**, as proof of expertise and record of completion;
- **Evaluating** and monitoring performance metrics and **progress**; and,
- **Tracking** and **organizing reports** for both groups and individuals.

Benefits:

- **Cost-effective** – most affordable prices for this kind of a system, both cloud and deployment.
- **Time-saving** – all information in once place, user-friendly and easily accessible.
- **Customization** – the system can be adjusted to suit the users in any kind of way at nominal prices.
- **Secure** – system access can be restricted to a closed network, if necessary.
- **Easy deployment** – the installation process is very simple – it is performed within minutes.

Most of the maintenance functions such as installing patches and upgrading to the next release are automated. Installation, configuration, backup, restoration and migration of the system to another server or physical location is extremely simple and can be usually done in a few easy steps.

Technology

The system has been coded in Java programming language. Since it is a web application, it can be accessed through a web browser (Microsoft Edge, Chrome, Firefox, Safari, Opera, etc.). However, this does not mean that data open to everyone – it is possible to restrict access to a closed network for private purposes. Data is stored within an Oracle database – the only database type compatible with the system, which is received alongside the system.

It is distributed in a virtual machine package, with a simple deployment process, based on the “plug and play” principle. It can be installed on a server or a workstation and accessed only within the secure, closed network, if necessary. There is very little maintenance involved, the system can easily maintain itself and all updates can be performed both online and offline.

Our team also offers complete system customization, according to client preferences. Our development pricing is among the most competitive in the current market. Minor customizations, such as logo and color change are included in the price of the application.

In addition, each product purchase includes free email support services for a term of 1 full calendar year. Additional support can be arranged at a nominal price. The product package also includes all of the necessary product documentation and video tutorials. Our Support team also provides training services for employees at very affordable prices.

About YouTestMe
