

OPTIONAL OMR SCANNER FOR PAPER-BASED TESTING

Test evaluation process with YouTestMe GetCertified integrated with OMR scanner

Phases:

1. The Instructor creates a test and assigns it to students in the **YouTestMe GetCertified** application.
The OMR tool can grade:
 - Single choice questions
 - Multiple choice questions
 - True and false questions
2. The instructor exports tests from the **YouTestMe GetCertified** to PDF and prints them alongside with the bubbles sheets for each student assigned to the test.
3. The instructor gives both the tests and bubble sheets to students.
4. Once the students fill in the bubble sheets, the instructor collects the bubble sheets and scans them with a scanner.
5. The OMR tool analyzes the scanned content and sends the results back to the **YouTestMe GetCertified**.
6. The instructor makes a final review of the test results in the **YouTestMe GetCertified** and generates test reports.
