1 Introduction

This document's purpose is to demonstrate that all form fields are accessible. Required form elements or elements that require a specific format, value, or length provide this information as a text description. Text labels are associated with form input elements. Elements with multiple labels are provided in a meaningful order. Page headings and labels for form and interactive controls are informative.

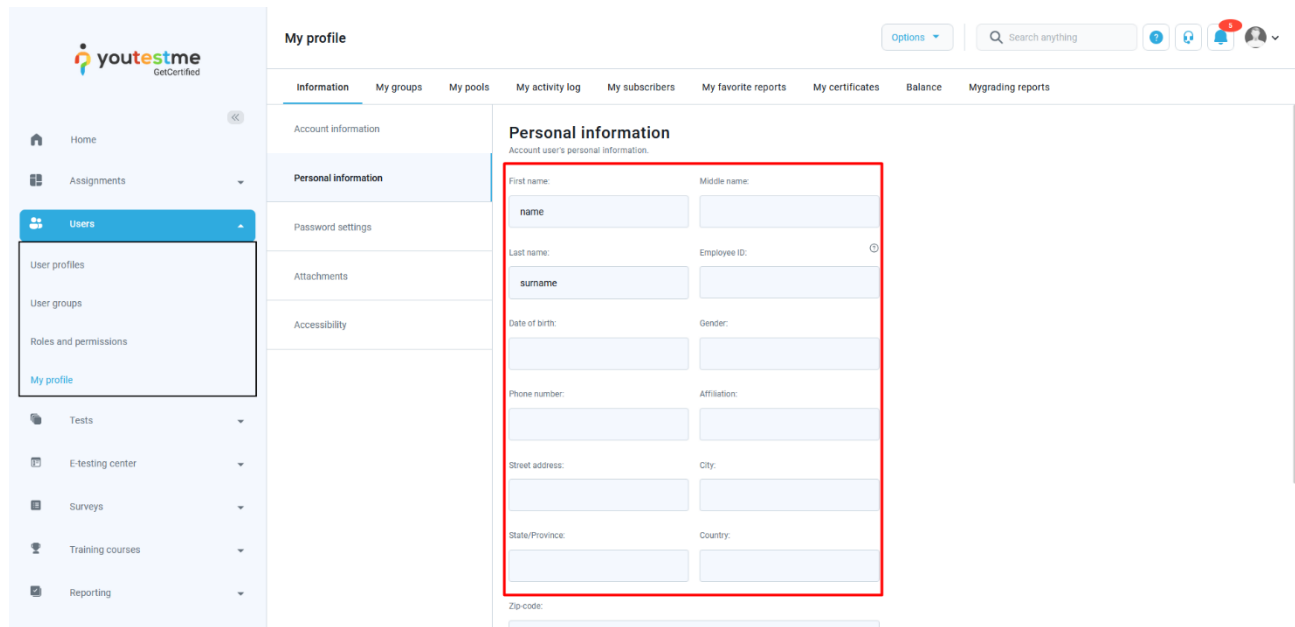

2 Form elements with text descriptions

Certain form elements require additional information to be filled in/checked. In the following example, the user must follow the instructions for the password fields to be filled in correctly. These instructions are read by the screen reader when using the **arrow keys**.

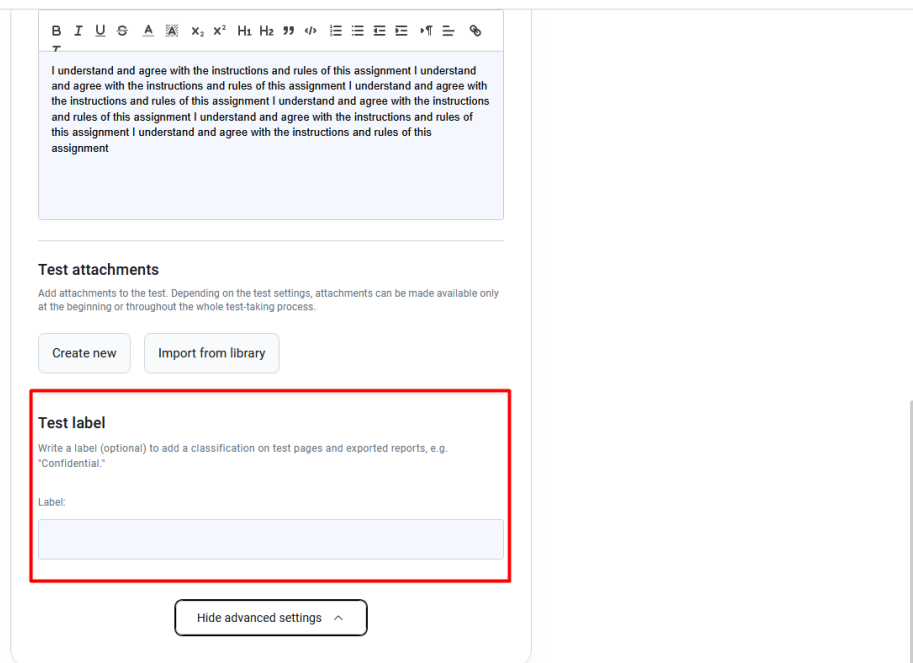

3 Text labels for input elements

All input elements possess text labels related to them.

4 Elements with multiple labels

Certain elements have multiple labels. They are presented in a logical order.

5 Informative headings and labels

Any short text, such as a heading or a label, is informative and unique. Duplicate generic headings are avoided wherever possible.
