## 1 Introduction

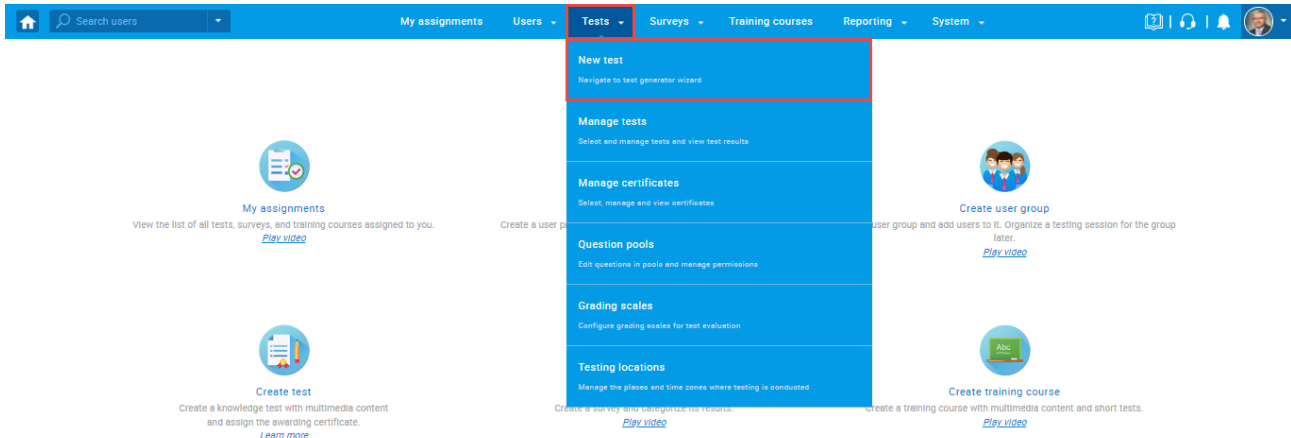

This document explains how to add specific feedback to each choice option and ability to withhold feedback on tests must also be an option.

## 2 Steps

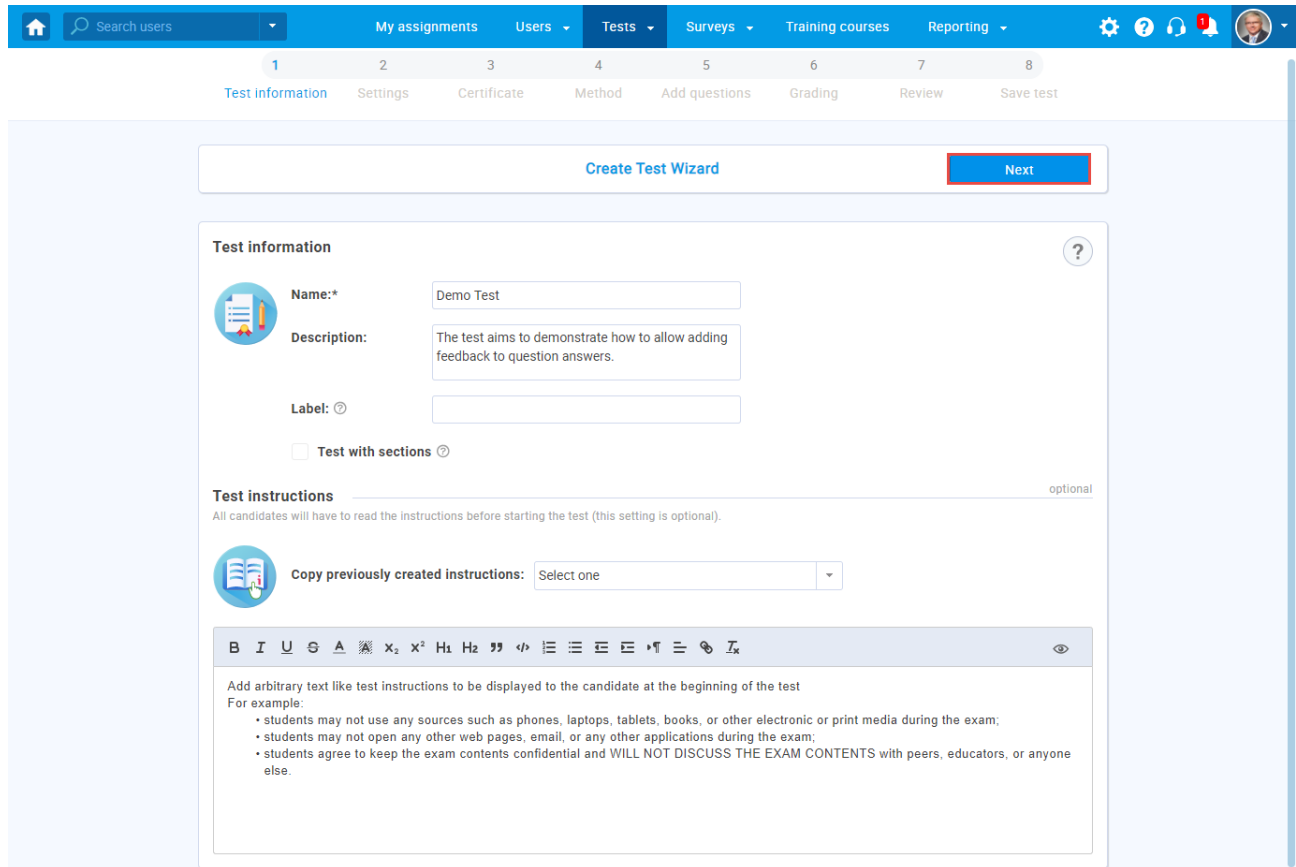

To enable the answer feedback option, you need to create a test and configure its settings regarding answer feedback.

### 2.1 Creating a test

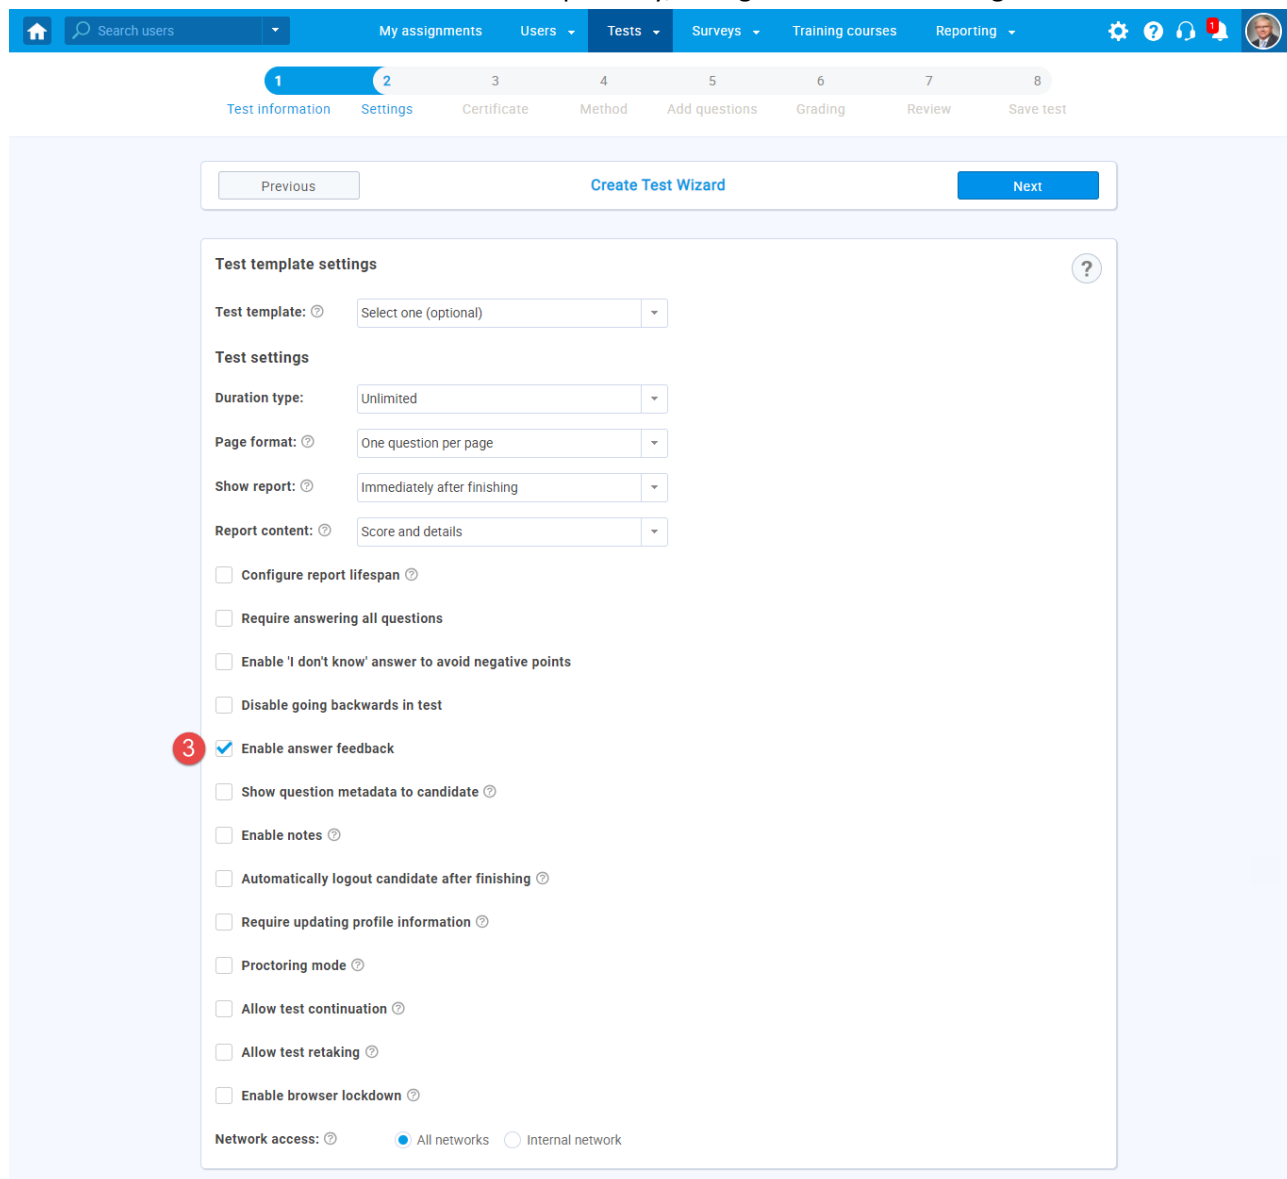

1. Hover over the “**Tests**” in the main menu and select “**New test**”.

2. Enter the basic test information in the first step of the test creation process, then click the “Next” button.

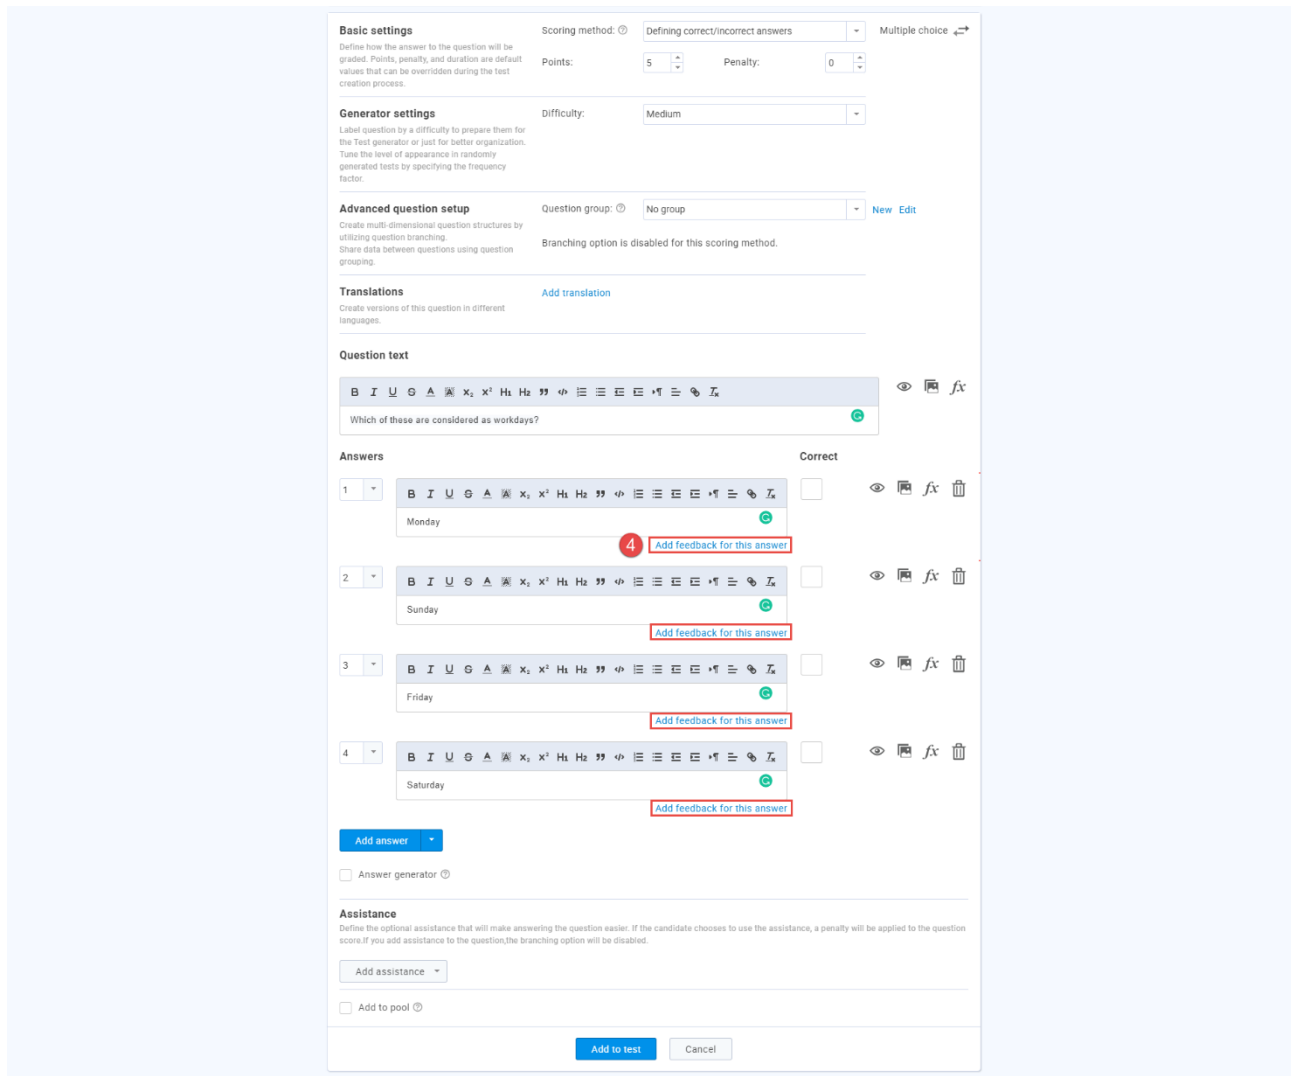

3. Tick the box **“Enable answer feedback”**. Optionally, configure other test settings.

4. In the fifth step of the Test Creation Wizard, choose the way of adding questions to your test. After you import questions, or create new ones, you can add feedback to the desired questions and their answers. Click on the pen icon to open question editor.

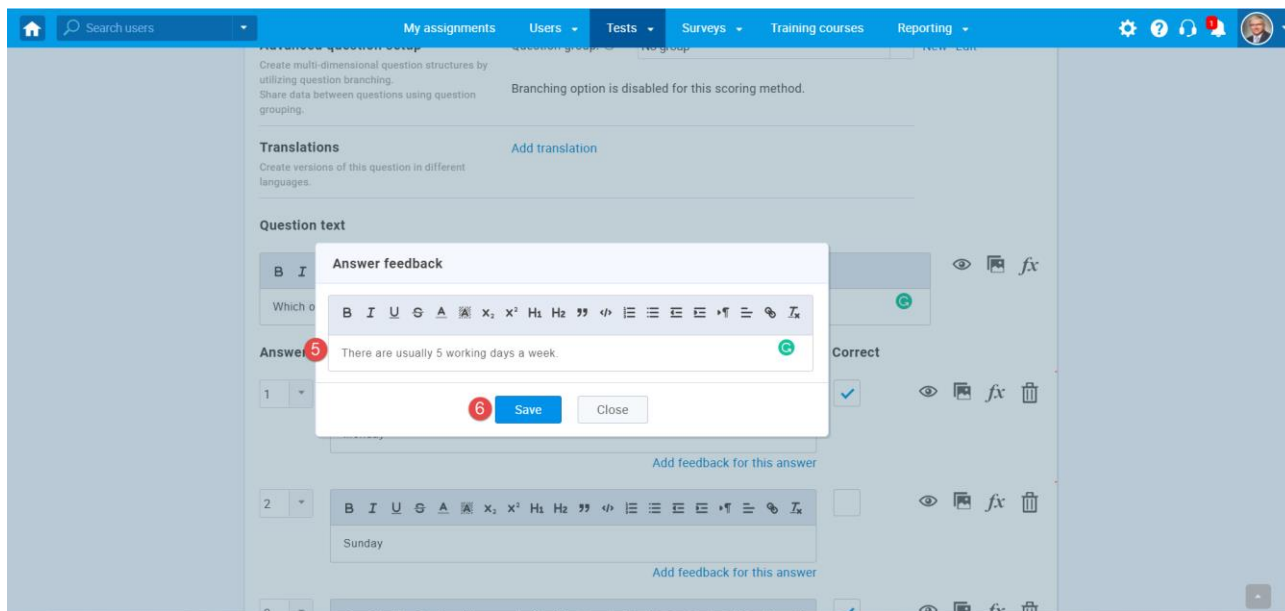

For example, to add feedback on the multiple-choice question type, click the **“Add feedback for this answer”**. Feedback can be specific to each choice option. For more information on how to create each question type, please see the Question pools topic.

**Note:** You can define answer feedback also in the Question Pools section in the Tests module. However, the option must be enabled in the test settings in order for feedback to be displayed.

The screenshot shows the 'Answers' section of the question editor. The question text is 'Which of these are considered as workdays?'. There are four answer options: Monday, Sunday, Friday, and Saturday. Each option has a text editor and a 'Correct' checkbox. A red box highlights the 'Add feedback for this answer' button for the 'Monday' option, with a red circle containing the number '4' next to it. Below the 'Add answer' button, there are checkboxes for 'Answer generator' and 'Add to pool'. At the bottom, there are 'Add to test' and 'Cancel' buttons.

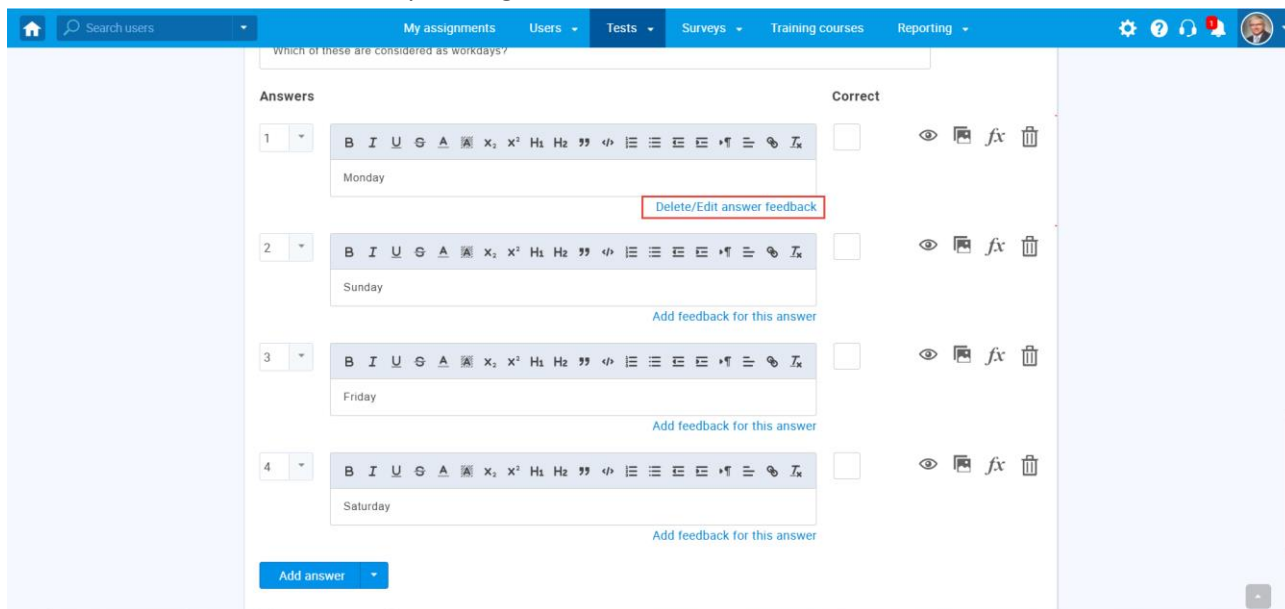

5. Enter the feedback text. This text will be displayed to candidates during the test-taking process only if they choose this answer.
6. Click the “Save” button to add feedback for this answer.

**Note:** You can define feedback for each, or for selected answers in a particular questions.

7. Finish creating the question by clicking the “**Add to test**” button.

You can edit or delete feedback by clicking the “**Edit/delete answer feedback**”.

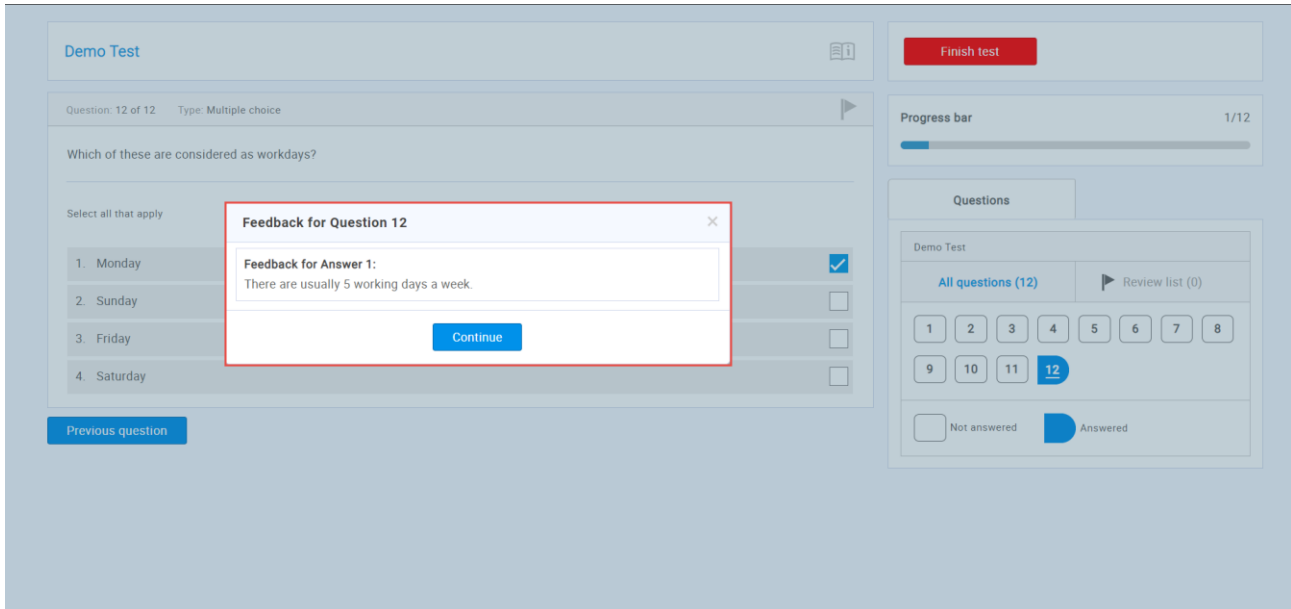

You can add as many questions as you want, choose additional test settings, complete the Test Wizard and publish the test.

**Note:** It is possible to add answer feedback for single-choice, multiple-choice, and true/false questions.

## 2.2 Displaying feedbacks from the candidate’s perspective

In questions that contain answer feedback, when the candidate selects the desired answer(s) and clicks the “**Next**” or “**Finish test**” buttons, the feedback will appear.

An example is shown in the picture below.

The screenshot displays a test interface for a 'Demo Test'. The main question is 'Which of these are considered as workdays?' with four options: Monday, Sunday, Friday, and Saturday. A feedback modal is open for 'Question 12', showing the feedback for the first answer: 'There are usually 5 working days a week.' The modal includes a 'Continue' button. The interface also features a 'Finish test' button, a progress bar (1/12), and a 'Questions' panel with a grid of question numbers (1-12) and a legend for 'Not answered' and 'Answered'.
