YouTestMe

Roadmap

Table of Contents

1 YouTestMe Roadmap

This document contains what is new in the latest YouTestMe GetCertified version and what to expect in future releases.

2 Beta Version

2.1 E-Testing Center

YouTestMe GetCertified allows you to organize comprehensive end-to-end examinations online with new functionalities that simulate a testing center experience. You can organize multiple testing sessions, set their dates, and allow your candidates to book the desired session for taking a test.

For more information, you may take a look at the following links:
- [Organizing exam booking](#)
- [Organizing exam booking with e-commerce](#)
- [Booking, canceling and rescheduling a session](#)

2.2 Paper-Based Testing

In the latest release, we have improved mechanisms for organizing paper-based testing. The platform now allows you to create your tests within the application, export them to a print-ready PDF and distribute them to candidates via email or in a paper form. YouTestMe GetCertified can also generate answer keys, which can help you quickly evaluate paper-based tests.

Your paper-based exams can be completely managed within the application, including:
1. organizing common sessions for each testing location
2. previewing the testing schedule for a specific location by:
    1) Month
    2) Week
    3) Day

3. managing sessions and assigning proctors

For more information on the latest paper-based testing functionalities, please take a look at the following materials:

- Scheduling a common session
- Importing offline test responses

2.3 LTI Standard

YouTestMe GetCertified now supports the LTI standard, allowing you to connect it easily with your LMS or any other system you may be using. You may learn more about it in this video.

2.4 QTI Standard

The platform is enriched with a new importer, allowing you to add questions using the QTI package into question pools. Please take a look at this article for more information.

2.5 JSON Export/Import

To allow you simple data transfer between different YouTestMe GetCertified environments, the application now supports JSON standards. With JSON, you can easily export question pools you created on one environment and import them into another.

2.6 API Integrations

YouTestMe GetCertified can be integrated with any system using existing standards and custom API that is highly flexible and allows different integration types and workflows. To get an insight into YouTestMe GetCertified API functionalities, please take a look at the following materials:

- Article - Integrating YouTestMe GetCertified

- [API Development Portal](#)
- [Video - Exploring API with Swagger UI](#)

The integration possibilities will be further developed to support even more straightforward and seamless workflows in the upcoming releases.

2.7   Multilingual Examination

YouTestMe GetCertified supports both multilingual interface and exams.

The application interface is currently available in more than 20 languages and can be translated into any additional language upon the client's request. When logging into the application, each user can select the preferred language in which the application will be displayed.

Multilingual application interface

Also, exam questions can be translated into any language supported by Google Translate. Administrators or test managers can manually add translations for each question and create multiple language versions of the same question. While taking the test, the candidates can choose their preferred language version for each question.

Multilingual questions

To get an insight into this process, please take a look at this video.

2.8 Attempt Verification Options

The new application version contains a module for verifying test attempts. This module is beneficial if test attempts in YouTestMe GetCertified should be verified before transferring their results to another system.

On this page, three options can be selected:

- Immediate after completing test verify by hold criteria – for verifying test attempts automatically after the test is completed according to defined conditions
- On-demand verify by hold criteria – for verifying test attempts on-demand according to defined conditions
- One by one manual verification – for verifying each test attempt separately

2.9   Templates and Editors

The platform's templates and editors now include more advanced options such as:

- Option to import question tags via Question Pool Excel template.
- Option to import answer feedback via Question Pool Excel template.
- New rich text editor which offers full support for tables, multiple images, etc.

2.10 Flexible Configuration of Reports and Pages

YouTestMe GetCertified now allows more flexibility in the simple configuration of desired content displayed in reports and application pages. For a preview of new possible options, please take a look at these articles:

- Customizing personal report
- Registration page configuration

2.11 Custom Question Properties

The primary purpose of custom question properties is to achieve a more extensive system for searching and filtering questions through question pools. Custom question properties allow users to:

- Create as many question properties (columns for searching and filtering) as they want.
- Define question property name, predefined values, or use free text to search through this property.
- Include them into question pool tables.
- Search questions in the pool using predefined values or free text.

Custom question properties are created, configured, and enabled in the system settings as custom user properties.

2.11.1 Custom Question Properties in Excel File

The Excel template used for bulk importing questions contains an additional column for each question property created by the client. Users define question properties in the Excel file, as well, and skip adding or categorizing questions manually in the question pools.

2.11.2 Custom Question Properties in Report Builder

Users can include question properties in custom-made reports generated using report builder and apply advanced search filters on the report based on those properties.

3   Roadmap

3.1   Booking Fees and Deadlines

The current e-testing center workflow will be enriched with options to set booking fees and deadlines, as well as deadlines for canceling a booked session and associated cancellation fees.

3.2 Custom Question Properties & Test Generator

In the future, it will be possible to search tests using an advanced generator that allows to search and filter tests in the system by custom question properties of the questions contained in those tests.

3.3 OpenID Connect (OAuth Protocol)

In addition to SAML 2.0, YouTestMe will support OpenID Connect OAuth protocol for single sign-on. It enables your users to seamlessly access exams in YouTestMe GetCertified from other systems, like your LMS, CRM, or HR software. YouTestMe GetCertified can act as a Service Provider (SP) through the OAuth protocol, which allows the exchange of authorization data with Identity Provider (IdP).

3.4 User Interface

The YouTestMe team currently works on improving the application interface to make it more attractive, user-friendly, and simple to use.

3.5 Notifications

YouTestMe GetCertified will, in future releases, contain an improved notification module to allow more flexible and advanced in-app and email communication. Since the module is currently in development, the YouTestMe team would be glad to consider including any notification you may need into our roadmap.

3.6 Custom Home Screen Dashboards

In addition to custom registration pages and reports, the platform will contain custom home screen dashboards. Our clients will be able to configure the appearance and desired functionalities of the home screens on their side. Since the module is currently in development, the YouTestMe team would be glad to consider including any ideas and requirements you may have in our roadmap.

3.7 Training Courses

The current training courses module will be further enriched with better controlling options for training steps and candidates.

3.8 Mobile Application

YouTestMe Mobile will allow your candidates to take practice tests or official exams on mobile devices, making test-taking more practical and convenient.

3.9 Widgets Dashboard

Widgets dashboard will allow you to configure custom home screens for each user role by making favorite modules and features easily accessible.

3.10 Workspaces

Large corporations with multiple independent institutions within it will be able to facilitate the organization's processes by creating separate workspaces. Each workspace can have its own organization and structure, but all of them can be administered through a single administration dashboard.

3.11 Workflows

Creating your custom workflows within the application will make your daily processes automated and efficient.
